Abstract (en)
[origin: DE102006012056B3] The device has two locking slides (10, 11) for locking actuation openings (4, 5), where the slides are displaced between a locking position locking the actuation openings and a release position releasing the openings, respectively. The locking slides are coupled with each other by locking latches (18, 25), a locking lever (27) and a fastening unit (26), such that one of the slides is locked in the locking position when the other slide is in the release position.
