Abstract (en)
It is a seat that basically consists of a structural cover that is split into compartments that, in the specific case of a sofa, has different cavities for the backrest, seat, armrest and other parts of the sofa, in such a way that bags filled with a lightweight material can be fitted into and adjusted inside these cavities, so that these bags are really the elements that serve to reinforce the sofa as a whole, thus obtaining a low-cost and lightweight product that is easy to transport because of its slight volume as a result of it being possible to dismantle it before transporting it, which sets it apart from most conventional sofas, which have to be moved in their completely assembled form. The bags can be composed of a single compartment or several, in which case each compartment may in turn be filled with different materials in order to obtain different degrees of flexibility.
