Abstract (en)
A container is disclosed having corner supports 30 at each inside corner for increasing the strength and weight bearing capacity of the corners. The container is formed from a blank comprising flaps 18 which are configured to automatically form the corner supports 30 when they are folded in to make the corners of the container. The flaps 18 comprise a first portion 18a hingedly connected to a second portion 18b such that the second portion 18b extends across the corner to form the corner support 30 when the flap 18 is folded in.
