Abstract (en)  
Explosive material production involves providing a fuel base component from a hydrocarbon in a molecular dispersion structure, in which the molecules of the hydrocarbon are present in bulk shape. Volume of the fuel base component is extended by enlarging the free space volume of the molecular dispersion structure, and obtained volume-extended molecular dispersion structure is adjusted. The fuel base component is mixed with a liquid alcohol for volume extension, and the alcohol of the fuel base component is desorbed. An independent claim is also included for a method for explosion, which involves mixing combustible matter with an oxidizing agent.

Abstract (de)  
Die Erfindung betrifft eine Brennstoffkomponente für einen Explosivstoff, wobei die Brennstoffkomponente einen volumenerweiterten molekulardispersen Kohlenwasserstoff aufweist, sowie ein Verfahren zu dessen Herstellung. Ferner betrifft die Erfindung einen Explosivstoff, gebildet aus der Brennstoffkomponente mit einem Oxidationsmittel, einen mit dem Explosivstoff gefüllten Sprengkörper sowie ein Explosionsverfahren.
