Abstract (en)
An arrangement by a manhole cover including a well curb (2), preferably made of concrete, where a ring (6) made of steel plate is disposed at an outer side of the well curb (2) so that a relatively thin-walled plate curb is formed which is intended to enclose a manhole cover (4), preferably of concrete, and to constitute a stable side limitation for a surface cover, e.g. consisting of paving stones of concrete, and which fit closely to the well curb. In a very simple way it thus becomes possible to avoid using an unsightly and relatively expensive well curb of cast steel with associated manhole cover in an adjacent surface covering of paving stones of concrete.
