Abstract (en)  
[origin: EP1992770A1] "Door handle for a refrigerator, the refrigerator comprising (2) a body (20), and a door (21) joined with freedom of rotation to the body (20). The handle (1) comprises a vertical arm (10) that is joined to the door (21) with freedom of rotation, it being able to rotate in relation to a vertical axis of rotation (3) in order to open said door (21), and at least one actuator (11) that may act against a front part (20a) of the main body (20) to help in the opening of said door (21) when the arm (10) rotates in relation to the axis of rotation (3). The actuator (11) is joined to the arm (10) and rotates in conjunction with said arm (10), said rotation causing said actuator (11) to push against the front part (20a) of said body (20)."
