Abstract (en)

The discharge housing has support elements arranged in a flow channel for stabilizing of the discharge housing. The discharge housing is asymmetrically formed in an area limited to the flow channel. The support elements are arranged transverse to the flow channel. One support element is designed as a separation wall (15) or ribs through the flow channel. The support elements connect a gas discharge flange (11) with a bearing housing flange (12) in an axial direction.

Abstract (de)

Es wird ein Gasaustrittsgehäuse einer Abgasturbine vorgestellt, welches ein Stützelement aufweist. Das Stützelement ist als eine Trennwand (15) ausgebildet, welche quer durch den asymmetrischen Strömungskanal führt. Dies führt dazu, dass das Turbinengehäuse (10) genauso stabil ist, wie wenn es eine symmetrische Form aufweisen würde.
