Abstract (en)
[origin: EP1992863A2] The channel (1) consists of walls made of polyester damping fibers, which are welded, stamped, pressed or glued together at the edges, possibly with overlaps, so that the edges and overlaps thus formed make the channel inherently rigid. The material may be in the form of strips and/or boards. There may be endpieces (2a, 2b) at the ends of the channels.
