Abstract (en)
[origin: EP1993171A1] The cable lug (10) comprises a contact area (12) and a conductor crimp area (16) at a distance from the contact area in longitudinal direction. The conductor crimp area has a pair of conductor crimp elements (18) for retaining and fixing a conductor (36) of an electrical cable. The conductor crimp elements has two crimping sections (20,22), where unwinding of the former crimping section in a perpendicular extending direction to a longitudinal axis (L) of the cable lug is larger than the latter crimping section. An independent claim is also included for a cable connection.
