Abstract (en)

[origin: WO2007104303A1] The invention relates to a holder for fixing roll units (5), especially stationary roll units and/or multiple roll units, to a fishing rod (1). Said holder (4) comprises at least one receiving module (13), the receiving plane (E) of which forms a pre-defined angle (?) with the longitudinal axis (HL) of the holder (4) or the axis of the rod (RA). The invention also relates to a receiving module for a roll holder for fixing roll units (5), said receiving module (13') having a receiving surface (14) for receiving a roll unit (5) and an opposing bearing region (14'). Advantageously, the receiving surface (14) and the bearing region (14') form a pre-defined angle (?) and a clamping element (18) is provided on the receiving surface (14).
