Abstract (en)

[origin: WO2007104616A1] The invention relates to rolled material (1) comprising a front (2) and an end (3). The rolled material is rolled in a roll gap (9) of a roll stand (5) to a first desired measurement (d1*), beginning at the front of the rolled material (2). When the rolled material (1) is being rolled in the roll stand (5), it is continuously determined by a control computer (6), which locates the position (10) of the rolled material (1) which is currently in the roll gap (9). When the position (10) of the rolled material, which is directly in the roll gap (9), corresponds to a predetermined first modification position (4) of the rolled material (1), which is arranged between the front of the rolled material (2) and the end of the rolled material (3), the roller of the rolled material (1) ends at a first desired measurement (d1*) such that a first step (12) is introduced into the rolled material (1) on the first modification point (4).
