Abstract (en)
[origin: WO2007101747A1] The invention relates to a method and a device for producing a plastic part that consists of a plurality of components. The device according to the invention comprises a closing unit for receiving at least one mold in which a thermoplastic molded body can be shaped or positioned, and at least one polyurethane unit for introducing a polyurethane material into a larger cavity comprising the thermoplastic molded body. The invention is characterized in that at least one additional polyurethane unit for introducing an additional polyurethane material having different product properties into the same or a different, larger cavity, is provided or in that the first polyurethane unit is adapted for an additional polyurethane material having different product properties being introduced into the same or a different, larger cavity.
