Abstract (en)
[origin: US2009120559A1] A shrink-film seal (101, 201, 301, 401) is described having at least one stamped portion (102, 402, 602, 702) which is arranged along the circumference of a container (203, 303) which is to be sealed. The regions which are defined by the stamping lines are designed in such a way that at least one contiguous window is produced by a shrinking process. This achieves a situation where the opening of the sealed container can be immediately detected simply, without aids or expert knowledge and therefore a considerable increase in the product security is ensured. A method is also described for sealing containers with a shrink-film seal (101, 201, 301, 401).
