Abstract (en)

[origin: WO2007101770A1] Device having a first gearing part (23) for meshing with a second gearing part (26), in particular a starting device having a pinion for meshing with a ring gear of an internal combustion engine (29), characterized in that there is at least one means (56, 10 53, 45) which can determine a motion state of the first gearing part (23) and a motion state of the second gearing part (26). Method of operating a device (20) having a first gearing part (23) for meshing with a second gearing part (26), in particular a starting device having a pinion for meshing with a ring gear of an internal combustion engine (29), characterized in that there is at least one means (56, 53, 45) which determines a motion state of the first gearing part (23) and a motion state of the second gearing part (26).
