Abstract (en)

[origin: US2007207889A1] A propeller shaft and energy storage assembly includes a first power transfer mechanism for selectively drivingly interconnecting the propeller shaft and an energy storage device to store energy within the energy storage device. A second power transfer mechanism is operable to selectively retain and release energy stored within the energy storage device. A third power transfer mechanism selectively drivingly interconnects the energy storage device and the propeller shaft when vehicle acceleration is desired.
