Abstract (en)
[origin: WO2007104877A1] The invention concerns a process for joint synthesis and spatialization of multiple sound sources in associated spatial positions, including: a) a step of assigning to each source at least one parameter ($p_{i</SUB>}$) representing an amplitude; b) a step of spatialization consisting in implementing an encoding into a plurality of channels, wherein each amplitude ($p_{i</SUB>}$) is duplicated to be multiplied to a specialization gain ($g_{i</SUB>}$)
