Abstract (en)
[origin: WO2007104373A1] The invention relates to a case for accommodating electrical and electronic devices and assemblies, in particular a mobile radio case. In order to provide a case having a self-supporting unit, which has the required stability and ability to withstand earthquakes and makes it possible to reduce the individual parts and material thicknesses as well as allows for standardized manufacture, at least the side walls, which, as do a base and an upper cover, consist of metal sheets which are bent back a plurality of times and are connected by means of a welded joint to form a self-supporting unit, have a reinforced bent-back portion, which points into the case interior and is integrated in the manufacture of the side walls.
