Abstract (en)

[origin: WO2007099251A1] The invention concerns a method for transmitting an information inhibiting at least one service associated with a called device, the method including a step of generating a call signal (4001) in order to set up a communication between a calling device and the called device via at least one communication network. According to the invention, such a method further includes a step of substitution (4005), to be executed when said call signal includes an inhibiting command, and during which said inhibiting command is replaced by said inhibiting information.
