Abstract (en)
[origin: EP1994852A1] The box has a cosmetic product and/or applicator contained in a base, and a bracket (3) connected to the base by a hinge. A cover (12) is located at an inner side of the bracket. A mirror (16) is carried by the cover that rotates relative to the bracket in order to move the cover from an initial landscape configuration to a portrait configuration and vice versa, where rotation of the cover is performed in same plane and around a rotation axis (X) intersecting another rotation axis of the hinge after the rotation of the cover relative to the bracket.
