Abstract (en)
[origin: DE102007023783B3] The surface milling cutter (1) has a supporting table (2) on which a workpiece is fixed and has a passage recess, from which guide columns protrude, on which a downward projecting and passage recess gripping milling head is slidably guided with a drive unit, during milling. During clamping, the clamping element (27) acts upon one side of the arrester bar (10) to the stopper element (21,22,23) and is supported in opposite direction on the other side on a thrust bearing element (28) arranged free of play on supporting table.
