Abstract (en)

[origin: EP1995169A2] The installation (100) has a ramp (210) on which a platform (310) slides, where the platform maintains a boat (B). A gripping unit (400) grips a hull of the boat and includes two row of pillars (320) fixed on the platform. The pillars support articulated arms (410) between which the boat is placed on the platform, where the arms are pushers (420). The arms are individually movable between a gripping position in which the pushers contact the hull of the boat, and a disengagement position in which the boat is free.
