Abstract (en)

A device for collecting liquids (C) along railway tracks comprising longitudinal tile-like elements (S1, S2) open at the respective ends, extending alongside the rails (R) and supported by these via attachments (K) of the 60 UNI 3551 type and the like. The collecting device (C) moreover includes a pair of collector channels (VS) set transverse to the rails underneath the open ends of the tile-like elements (S1, S2), between respective pairs of contiguous sleepers (T) of the track, and communicating with an evacuation pipe (H) set alongside the track. The collecting device (C) does not require works of masonry for ditches and channels, can be easily recovered, and can be adapted to any type of track, sleeper, and corresponding attachments.
