Abstract (en)

[origin: EP1995387A2] The wooden component (1) is made of a full surface layer of planks connected with one another in longitudinal side surfaces. Another layer is provide, which is perpendicular to the planks of the former layer connected with these and at a distance (13) to parallel running planks. The latter layer is formed by two shells made of congruently running planks, which are connected with one another and with the planks of the former layer. The planks of the latter layer are fastened on the planks of the former layer. An independent claim is also included for a wall element for a building structure.
