Abstract (en)  
[origin: EP1995522A1] An oven (10) comprises a frame (12) defining a recess (14) that is accessible via a front opening (16), and a door (18) mounted to the frame (12), such as to take at least one closed position of the front opening, and at least one opened position, wherein the front opening is accessible from the outside. The door (18) comprises at least one outer panel (22) and at least one inner panel (24) forming a gap (28) in which closed door lighting members (32) are accommodated, which are placed at at least one door side (18) and spaced throughout this side. The closed door lighting members are adapted to generate a light beam directed towards the inside of the recess at least in the closed position of said door. Inside the door, at least one open door lighting member (44) is further accommodated, which is adapted to generate a light beam directed towards the inside of the recess (14) at least in one opened position (18) of the door.
