Abstract (en)
The multicolumn radiator (1) is defined by two heads (2), each having a hollow body (4) from which originate a number of pipes (5), and by a number of columns (3), each connected at one end to a respective pipe (5) of a first head (2), and at the opposite end to a respective pipe (5) of a second head (2). And the method includes a first step of forming an inner recess defining a socket (8) on the ends (6) of the pipes (5), and an outer recess defining a plug (7) on the free ends of the columns (3), or vice versa; a second step of fitting the columns (3) to the respective pipes (5) by inserting the plug (7) inside the corresponding socket (8); and a third step of connecting the column (3) to the respective pipe (5) at the join between the two.
