Abstract (en)

The present invention relates to a connector for an antenna device comprising a dielectric carrier (3) and a flexible film (1) arranged on said dielectric carrier and having a radiating element arranged on one side thereof positioned against said dielectric carrier (3), characterized in that said connector comprises an upper portion (8) and a lower portion (6) foldable against each other, wherein said upper portion (8) is provided with engagement means (10, 11) for securing said upper portion (8) to said dielectric carrier (3) when mounted thereon, said lower portion (6) is arranged to be positioned between said upper portion (8) and said dielectric carrier (3) when mounted thereon and said connector is provided with resilient means (7) arranged to conductively connect to said radiating element when mounted on said dielectric carrier (3).
