Abstract (en)

[origin: EP1406470A2] The hearing aid has a radio device for signal transmission, especially to a second hearing aid, whereby the radio device has an antenna device (2) for transmitting and/or receiving. The antenna device contains a self-stimulating oscillator circuit (L1,C1) that can consist exclusively of an LC oscillator circuit. The hearing aid has a receiver device (3) with a median filter arrangement (34) for noise signal reduction. An Independent claim is also included for the following: (a) a method of noise signal reduction for hearing aid reception signals.
