Abstract (en)  
[origin: WO2007096829A2] The sunroof system (R) comprises a cover or roof element (3) which swivels about a horizontal axis (4-4) between two facing uprights (5) projecting upwards above the body line (BL) of the bodywork of the motor vehicle (1), and a stowage compartment (7) open at the top, made in the motor vehicle (1) between and beneath the said uprights (5) . The cover or roof element (3) swivelling between a closed position in which it extends at least approximately horizontally and an open intermediate position in which it extends basically vertically, and then being movable downwards, from the open intermediate position towards a final hidden position in which it extends substantially vertically into the stowage compartment (7) . Between the uprights (5) a rear window (6) is fixed and with them forms an assembly that swivels about a horizontal transverse axis (B-B) near the body line (BL) of the motor vehicle (1), between an extracted or raised position in which the rear window (6) can connect with the roof (3) in the closed position, and a retracted or lowered position in which the uprights (5) extend partly below the said body line (BL) and the window (6) lies at least approximately horizontally.
