Abstract (en)

[origin: WO2007108767A1] The present invention relates to a industrial truck comprising a lifting stand (1) having a first and a second journal (11), in which each journal (11) is provided with a bushing (15) rotatable about the journal (11), a stand holder (7), which forms part of the chassis of the industrial truck and comprises a first and a second seat (21), in which each bushing (15) is rotatably mounted in one of the respective first and second seats (21) such that the stand holder (7) supports the lifting stand (1). The industrial truck is characterized in that the respective bushing (15) and seat (21) have such a mutual geometric configuration that when each bushing (15) assumes a first rotational position in the seat (21), the bushed journals (11) are radially displaceable in the respective seat (21) such that the lifting stand (1) is disposed detachedly in the stand holder (7), and when each bushing (15) assumes a second rotational position in the seat (21), the bushed journals (11) are radially locked in the respective seat (21) such that the lifting stand (1) is fixed in the stand holder (7).
