Abstract (en)
[origin: WO2007080237A1] Non-flush-mounted shower or over-bath shower wall mixer tap offering simultaneous or separate multiple functions, which could have one water-temperature adjustment lever for all the outlets or more than one water-temperature adjustment lever (13) and (14) dedicated to each outlet (3) and (9). In this way, the flow from each outlet could have different temperatures for the purposes of the use of each function, depending on the user's wishes, and could function simultaneously or separately. The device according to the invention may be installed in exactly the same location as a conventional mixer tap without supplementary work but with a number of water-flow outlets that could function separately or simultaneously. It is designed as a single piece whose overall size is identical to that of a conventional non-flush-mounted wall mixer tap and it is installed in precisely the same way as such a mixer tap.
