Abstract (en)

[origin: EP1835105A1] The system has an upper storage arm and a lower storage arm (14b) provided in a side which points to the locking direction of a slide wing. The arms are connected with vertical bar units for executing a synchronous movement of the slide wing, and to move-in and move-out of the slide wing with respect to a notch of a window frame (4). One of the bar units covered in the mounted state, is arranged in an opening of the section of the window sash. An independent claim is also included for a method for operating a fitting system.
