Abstract (en)

[origin: US2009053938A1] The invention relates to a plug-in connector (1) for telecommunications and data technology for the purpose of connecting a symmetrical data cable, the plug-in connector (1) comprising an electrically insulating plug-in connector housing (2) as well as first contacts (8) and second contacts (7), contact being made with a plurality of core pairs of a symmetrical data cable by means of the first contacts, and it being possible for an electrical contact to be produced with the contacts of a complementary plug-in connector by means of the second contacts, in each case two first contacts being assigned to a core pair, and a second contact being assigned to each first contact, the first contacts being DC-connected to their associated second contacts, in each case one common-mode filter arrangement being assigned to all of the core pairs.
