Abstract (en)

[origin: WO2007107674A2] The invention concerns a method for communicating data in an aircraft between at least a first data processing system (H) and a second data processing system (H) locally networked, each processing system being capable of executing at least one application (A), wherein the data to be exchanged are organized in messages (M), said messages as well as the processing systems and the applications being defined in files stored in a backup unit (2) connected to the network and accessible by the data processing systems.
