Abstract (en)

[origin: EP1997740A1] The sleeve has a bracelet (1) having height determined between both sides and to be placed around an object (2) e.g. ink cartridge, to form a data medium related to the object. The bracelet includes a weld type assembling unit (5) to form an envelope with a volume accessible through an opening that is closed by a sealing unit e.g. adhesive (7). The bracelet includes a cutting line (6) to use the envelope as a dispatching envelope. The line extends from a side to another side to break the bracelet so as to allow unfolding of the bracelet. An independent claim is also included for a method for labeling an object using a labeling sleeve.
