Abstract (en)
The system has poles (2) that are arranged in series in a driving direction. A wall surface (5) facing a traffic route is formed by a wall element (3). A damping element (4) is arranged in a force flow between the wall element and one of the poles, and is directly arranged on the pole. The wall surface is bent forwardly opposite to a perpendicular plane in a direction of the traffic route. A longitudinal section (6) is arranged between the wall and damping elements such that the section is damped by the damping element during impact. The section extends in the driving direction over the pole.

Abstract (de)
Fahrzeug-Rückhaltesystem zur Anbringung an Verkehrswegen, mit mehreren in Fahrtrichtung hintereinander angeordneten Pfosten (2) und mindestens einer dem Verkehrsweg zugewandten Wandfläche (5), gebildet von zummindest einem Wandelement (3), wobei im Kraftfluss zwischen dem mindestens einen Wandelement (3) und den Pfosten mindestens ein Dämpfungselement (4) angeordnet ist, wobei das mindestens eine Dämpfungselement (4) unmittelbar an den jeweiligen Pfosten (2) angeordnet ist.
