Abstract (en)  
[origin: EP1997960A2] The present invention relates to a linkage (2) for a front loader (74). The linkage (2) comprises an oblong power transmission section (8) and two coupling elements (4, 6), which are provided on the ends of the oblong power transmission section (8) in each case. The oblong power transmission section (8) along its longitudinal direction has a recess section (10) and at least one linear section (12, 14) adjoining it. The linear section (12, 14) extends substantially linearly along a connecting line between the two coupling elements (4, 6). In addition the recess section (10) is curved in such a manner that it is recessed in the vicinity of the connecting line and extends laterally offset from the connecting line in an extension (20), as a result of which power is transmitted via the extension (20) in the vicinity of the recess section (10).
