Abstract (en)
[origin: EP1998117A1] The present invention refers to a cooking oven, which is provided with a cooking cavity and a related door hinged on a vertical side edge thereof, a door locking device located on a vertical front corner edge of the cooking cavity, an engagement or latching device attached to the corresponding vertical corner edge of the door and comprising a fixed member connected to the vertical corner edge of the door, a latch elastically engaging a receptacle provided in the fixed member and adapted to slide therein so as to be able to both be introduced in said fixed member and protrude therefrom. The recessed locking device comprises a first lower portion with an outwardly opening surface having a triangular shape, which is positioned so as to feature an outer edge and an opposite inner side, and which is inclined on the horizontal plane with a slope descending from the inner side towards the opposite outer edge; it further comprises a vertical surface extending through said inner side, and an inner recess provided behind said first portion. The purpose of said triangular surface sloping on the horizontal plane is to enable the door to automatically rise and move into alignment as it is being closed.
