Abstract (en)

[origin: EP1998403A1] The antenna (4) has a fixed direction communication device arranged along channels of desired wavelength microwave signal. A rectangular section waveguide is provided with a large face that is drilled by a set of rectangular slits (5), whose large dimension (D) is lower than half-length of waves of the microwave signal, where spacing (E) between center of successive slits is near to the half-length of waves of the microwave signal propagated in the waveguide.
