Abstract (en)  
[origin: WO2007105960A1] A device for adjusting a seat of a chair (1) where the seat is equipped with adjustable, mutually connecting support elements in the form of fluid-filled adjustment elements (8, 9). The adjustment elements are provided between a plate formed seat support (5) and seat part (6) of the chair (1) and comprises at least two air cushions (8, 9) situated on opposite surface part of the seat support (5). The air cushions (8, 9) are mutually connected by means of a channel (10) equipped with a valve (11) for controlled regulation of the air transfer between the cushions (8, 9).
