Abstract (en)
[origin: EP1836983A1] The instrument comprises a cannula (3) and a handle (4), connected to the cannula, where a reservoir (5) is adjustably mounted in the handle. The reservoir has multiple chambers for receiving solid filler, where the chambers are arranged in the reservoir. The chambers are positioned one after another in a dispensing position, relative to the cannula, by displacing the reservoir, such that the fillers of the chamber, located in the dispensing position, are delivered to the cannula.
