Abstract (en)
[origin: WO2007055667A1] Present invention referred to the tied skis with crossbars (3',3") and inclined isosceles joints (1) jointed with the screws on the ski (5', 5") ahead and after the safety bindings (10). The composition according to the invention solved the problem for easier and faster skiing teaching and training of the competitors in new »carving« technique. The second realisation of the invention referred to the tied skis with crossbars (200',200") and biaxial joints (100) jointed across the guidance (400) and with the screws on the ski (800',800") ahead and after the safety bindings and makes possible the same inclination of the skis (800',800") $\beta' = \beta$ independent from moving the ski (800') (value A). With this embodiment of the invention the skiers themselves modernized their own technique of skiing with the »carving« technique.
