Abstract (en)
[origin: WO2007107401A1] A component (1) to be mounted on an opening of a wall, especially the inner skin of a refrigerator housing, comprises a main body (2, 3) and a flexible skirt (13) extending around the main body (2, 3). Said skirt, in relation to an axis running through the main body (2, 3), has a main section (14) that extends radially outward and towards a contact plane that is perpendicular to the axis. An edge section (15) surrounding the main section (14) has a surface (20) contacting the contact plane, the radius of curvature of said surface corresponding at least to the thickness of the main section (14).
