Abstract (en)
[origin: EP1840679A1] The case has a closed enclosure to receive a watch movement, and a middle (2) traversed by a winding stem. A base (5) and a glass (3) are fixed to the middle, and the enclosure is housed in an outer jacket. The enclosure has a base (10), a distance piece (12) and an upper element (9) with a central opening (9a) for the passage of the glass. An helical spring (14) is disposed between the base (10) and the enclosure to exert the pressure on a bearing surface (2c) of the middle to maintain the bearing surface pressed permanently against the edge of the opening.
