Abstract (en)

[origin: WO2007091932A1] Cash handling in a cash handling system (100) is described in terms of methods and arrangements that interact by exchanging cash as well as information signals. Cash transport units (110, 112, 114, 115) are configured to receive, store and provide cash, preferably in the form of notes. The transport units connect with ATM's (102, 104), shops (106, 108), vehicles (116, 118) as well as cash docking stations (117, 119, 121). Information flows among the entities of the system, between the transport units, the shops, the vehicles, the docking stations, a transport service control center (128), cash centers (120,122) as well as banks (124, 126). In addition to providing a solution to a general problem of how to minimize manual handling of currency in the cash handling system, security in cash handling is improved while at the same time providing flexible and cost effective cash handling in the cash handling system.
