Abstract (en)  
[origin: EP2000386A1] The marker has an antenna (12) sending an activation signal sent by an embarked communication device. Control units (18) control transmission units (14) so that the units (14) modulate a signaling signal carrying a signaling message. The antenna receives a configuration signal containing a configuration message originating from a configuration device. The configuration message defines operating mode of a marker in an emission mode or silent mode. The units (18) are connected to configuration memories (20, 22) for recording and storing the messages, respectively. An independent claim is also included for a device for configuring a communication marker.
