Abstract (en)
[origin: EP2000579A2] The device (1) has two support arms (2, 3), which are arranged relative to one another movably. A clothes line (5) runs from one support arm to the other support arm. The two support arms are arranged horizontally in a folding position. A covering (13) is suspended on the support arm, which is provided in the folding position in such a manner that the covering accommodates the drooping clothes line during suspending on the support arm, and/or lies at the support arm. The covering covers the support arm and the clothes line partially.
