Abstract (en)

[origin: EP2000583A1] Enzymatic treatment involves applying a solution containing cellulase, an alkaline substance, particularly an alkaline solution area by area on the textile before the treatment. The textile is provided in two-dimensional form. The alkaline substance is applied area by area only on a side of the two-dimensional textile. The alkaline substance is an aqueous solution of a metal hydroxide, preferably an alkaline earth metal hydroxide or an alkali metal hydroxide.
