Abstract (en)

The present invention relates to a method for arranging or removing a joint in a recess between parts of a road surface, comprising the step of temporarily arranging a cover plate over the recess outside working hours in order to make it possible for traffic to travel over the road surface. The invention also relates to a device for covering a joint arranged in a road surface, the device comprising at least one cover plate with a top and bottom side which can be arranged over the joint, and wherein the cover plate comprises dimensions and/or a form such that the joint arranged thereunder remains wholly or to at least considerable extent unloaded.
