Abstract (en)  
A decorative system is provided which consists of a decorative assembly, which is in at least tow parts having a first elongate member and a second elongate member. The parts cooperate with each other and a support means, which is adapted for attachment to a wall to provide support for the assembly. The elongate members are adapted to be attached to the support means in positions such that they are both in contact with the support and in part are both in contact with the wall. The assembly is easy to adjust in-situ, easy to assemble and is easy to replace with minimum disruption to flooring and decoration.
