Abstract (en)

[origin: EP2001093A1] The base (1) has an embedding space (17) including a locking and receiving part receiving and locking a body (11) of a monoblock electrical cord (10). The cord has an electrical connection sheathed wire integrated to the body and connected to its cylindrical electrical multi-contact prongs (12) in a position so that elastic electrical contact fingers (24) of a telephone handset (2) contact with the prongs when the handset is installed in an inclined frontal trough. The space has an elongated lateral prong receiving groove and an anti-jacking edge that fixes a free end of the prongs.
